

Synthesis and photochemical studies of two p-hydroxyphenacyl derived photocages

Changfeng Deng, David M. Chenoweth*

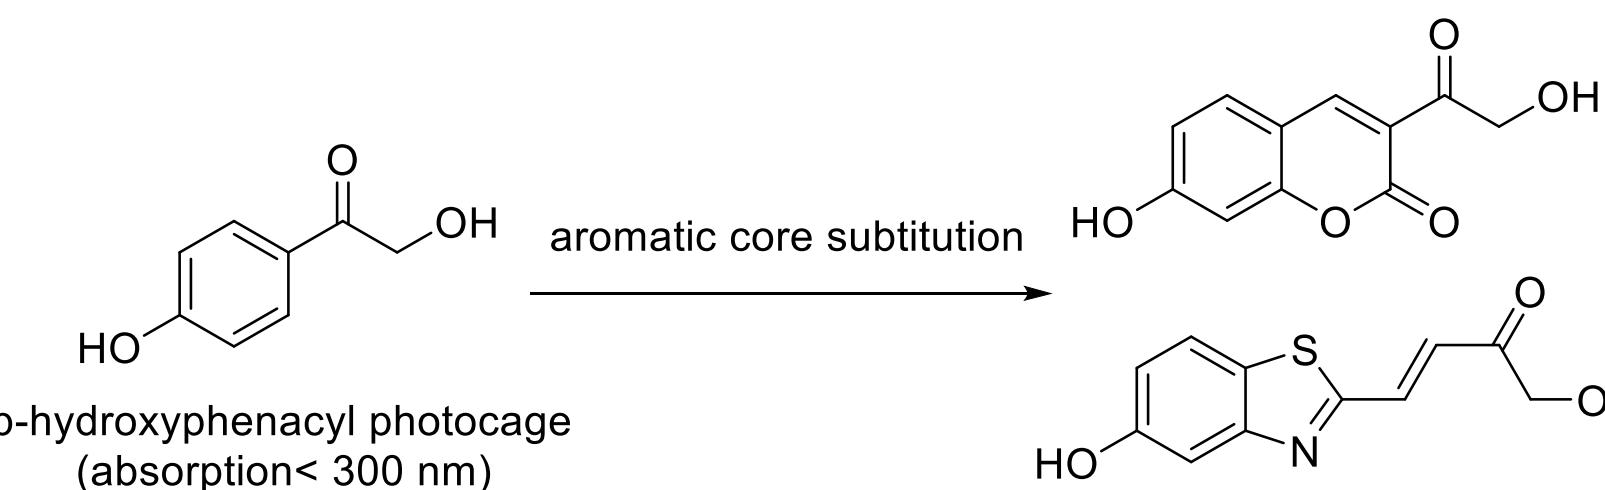

Department of Chemistry, University of Pennsylvania, Philadelphia, PA, 19104

Committee: David M. Chenoweth, Ana-Rita Mayol-Cabassa, E. James Petersson

Introduction

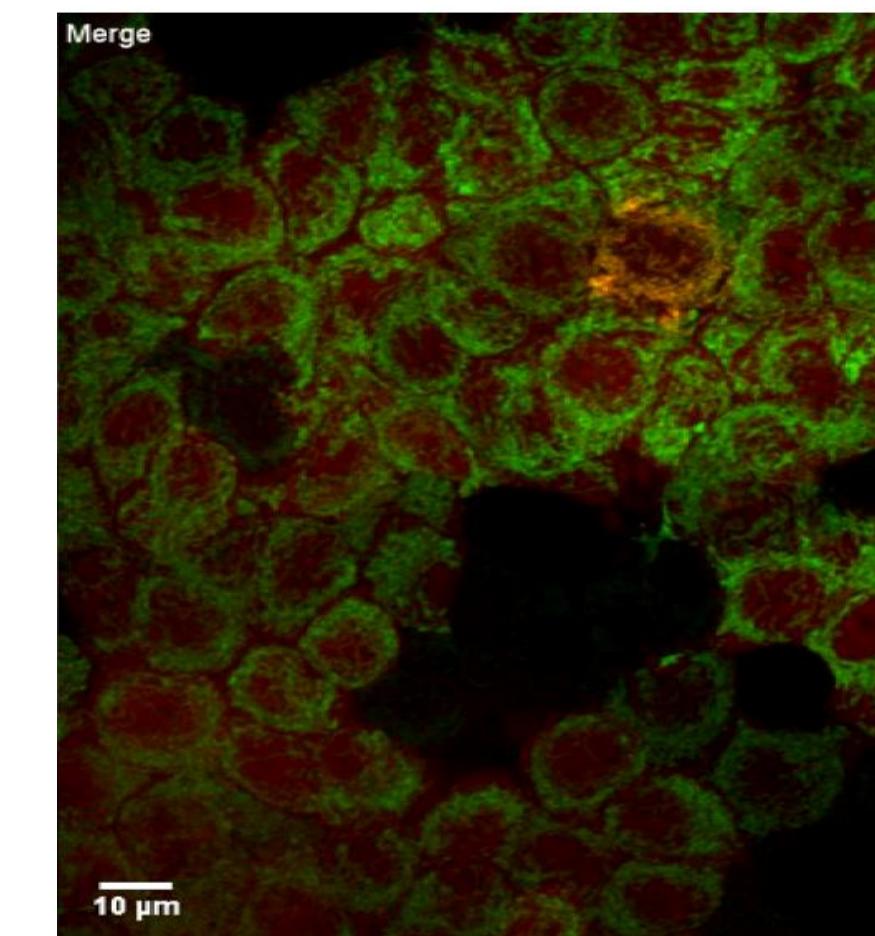

Experimental design

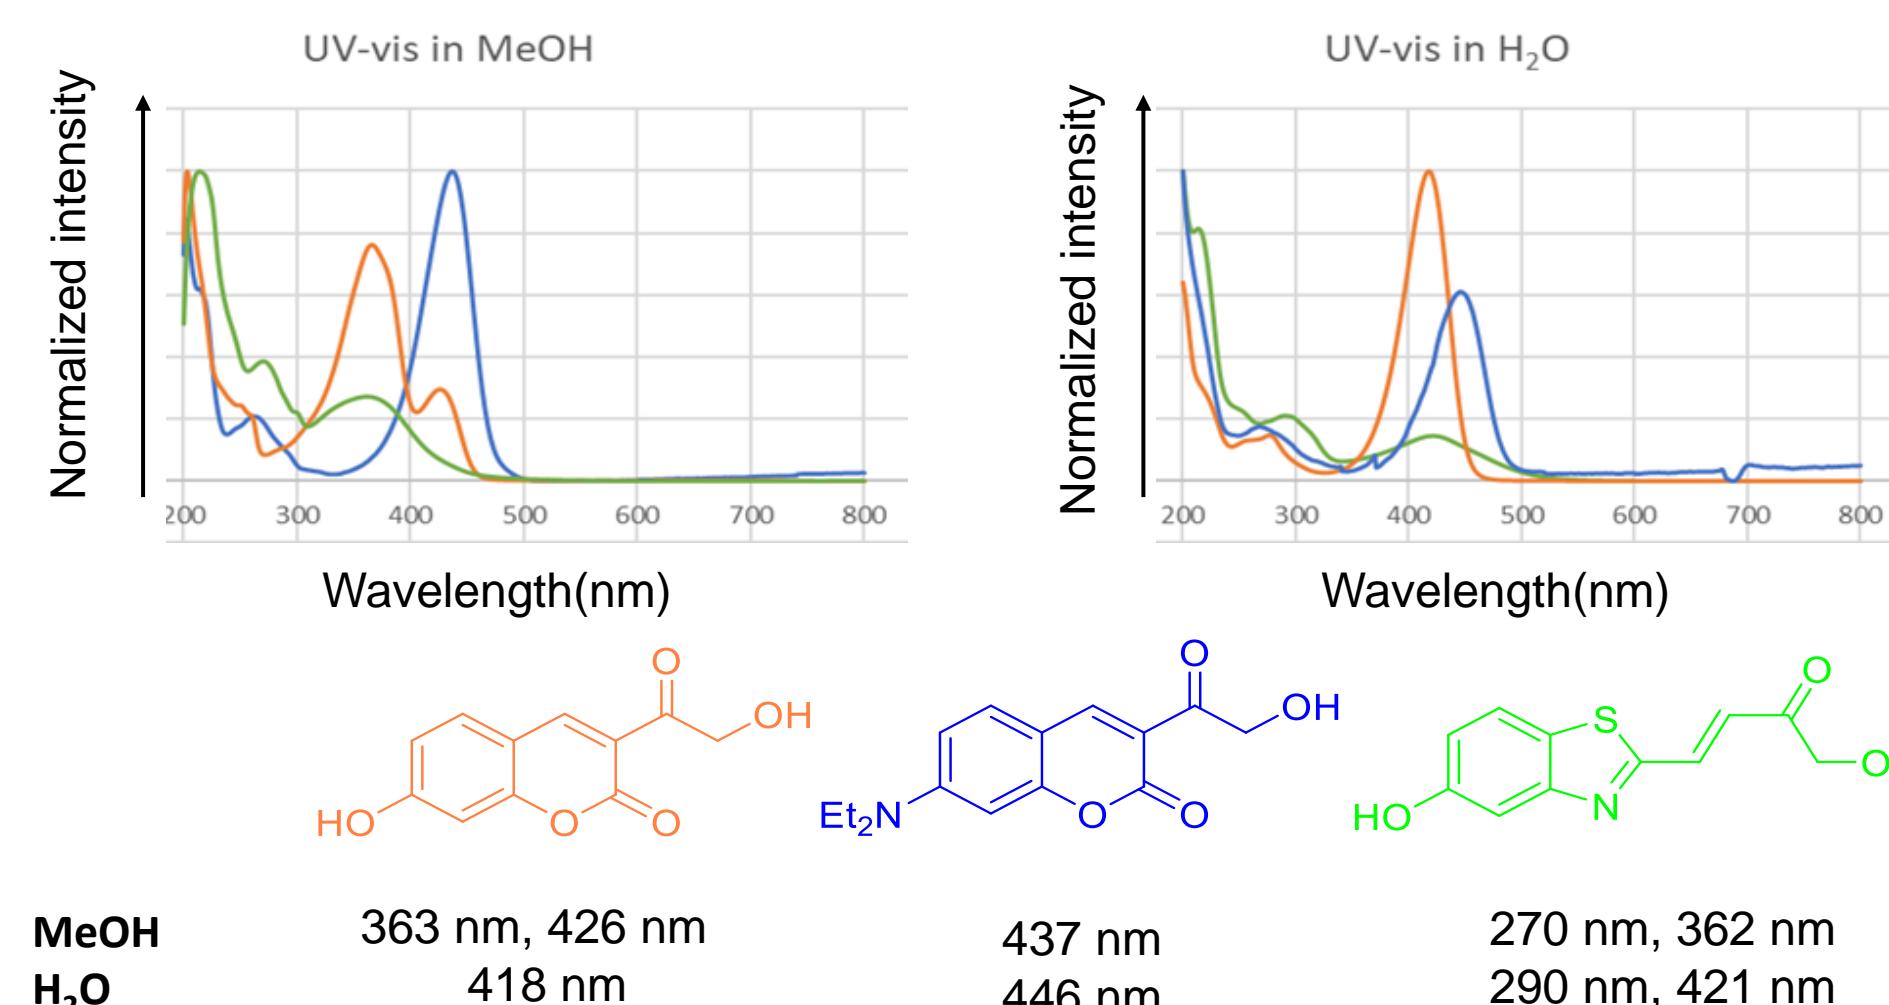

Conclusion and Future Development

The synthesis of three photocages and corresponding probe molecule is demonstrated. All these photocages have absorption maxima over 400 nm in water and can be easily prepared.

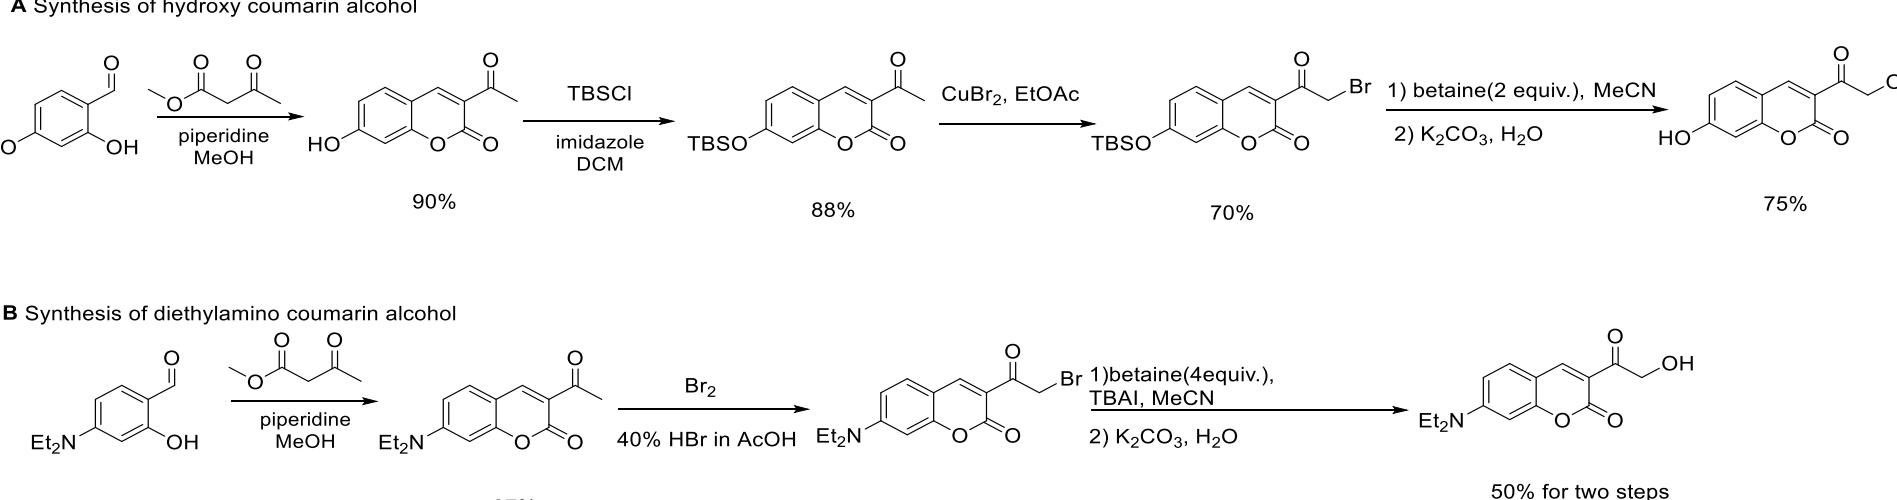

Future development 1-cell imaging experiment

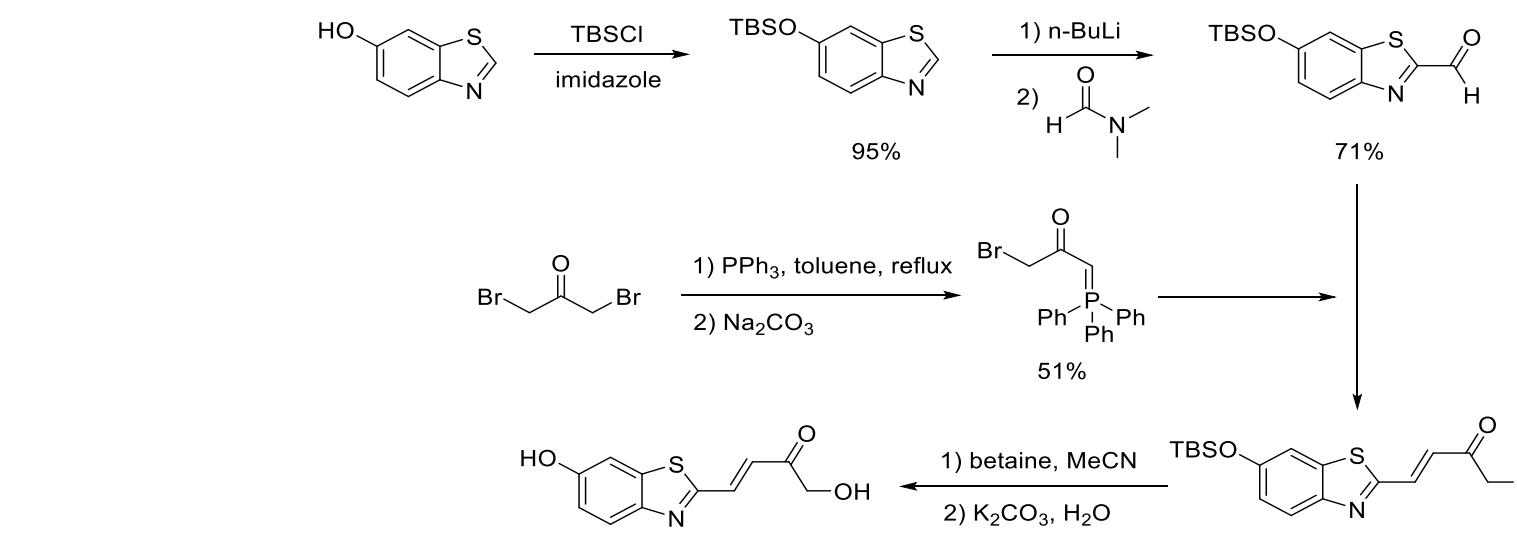

Result and discussion

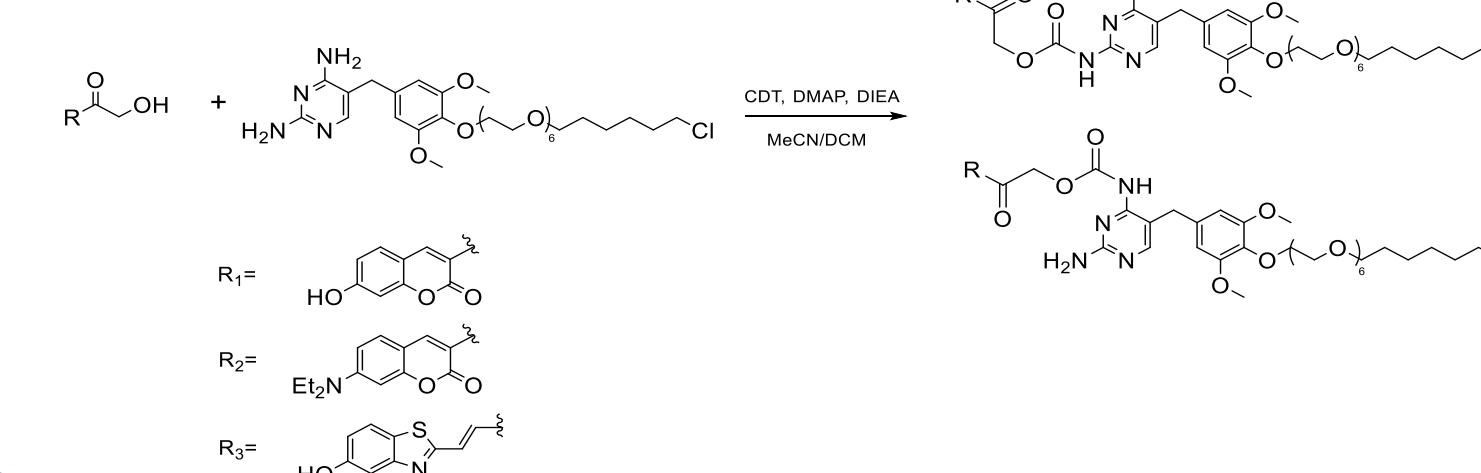

Synthesis of coumarin core photocage

Synthesis of benzothiazole core photocage

Synthesis of complete probe molecule
